Scent is one of the most powerful triggers of memory and emotion, deeply connected to the brain's limbic system.

At Aurora, we harness this to create immersive and emotionally resonant environments.

From simple canister-based scents for quick and instant bursts, to multi aroma vaporising machines for constant delivery - we have the solution for you.

Precision fragrance diffusion

Tailored scent delivery systems perfect for care homes, hospitals, museums, retail stores, corporate spaces, and beyond.

Multi-industry applications

Enhance memory recall for dementia patients, create signature brand experiences, add realism to immersive exhibits, and more.

Customisable solutions

Partnering with leading scent providers, we offer preformulated and bespoke fragrances to suit any environment.

Innovative bespoke projects

Our high-performance scent technology has been used in a variety of custom applications, including: perfume testing kiosks in luxury retail stores, mobile scent systems for vehicles and exhibition spaces, a scent globe at Heathrow Terminal 2, delivering aromas from around the world.

We offer a versatile range of scent delivery systems, designed for different space requirements and levels of control:

Scent nebulising machines

High-performance systems offering dry, nebulised scent diffusion for continuous, even distribution.

Canister-based scent systems

Ideal for quick, instant bursts of fragrance, perfect for interactive experiences or kiosk applications.

Custom control systems

Options include manual, timer-based, DMX, USB, and even smart integrations with existing control systems.

Multi-aroma vapourisers

Advanced solutions that diffuse multiple scents in sequence, enabling layered scent experiences.
